

Seeing Something Strange In Your Crop? Find Out What You Are Dealing With!

A DNA Multiscan can test for a large range of Fungal and Bacterial diseases in your crop. You can send samples in the form of plant tissue, water samples, or substrate samples.

New Diagnostic Tests Now Available!

There are now more options available for tomato growers worried about two of the most common diseases: Pepino Mosaic Virus and Bacterial Canker.

The symptoms of these two diseases can take on a variety of different forms, making diagnosis difficult.

The two NEW and exciting options for tomato growers:

- DNA Multiscan Test plus Canker and Pepino: A test for a wide variety of diseases and now **Bacterial Canker** and **Pepino Mosaic Virus**.
- DNA Multiscan Test Canker Only: Test specifically for **Bacterial Canker**.
